

CITY OF NEWARK, NJ

PUBLIC SAFETY NETWORK

A WinMill Success Story

When the city of Newark, New Jersey needed to implement a private high-speed wireless Public Safety Network, they turned to Let's Think Wireless (LTW). LTW, a wholly owned subsidiary of WinMill Software, designed a state-of-the-art, highly-redundant system to provide first responders with wireless broadband access to critical voice, data and video applications, even during a catastrophe.

Our solution incorporates the latest advances in both licensed and unlicensed radio technologies deployed on rooftops and other strategic assets throughout the city, creating a highly secure and redundant mobile network that provides uninterrupted service to Public Safety (Police, Fire, EMS) vehicles traveling throughout a twenty-seven square mile coverage area.

The hallmark of our solution is the enablement of enhanced real-time video surveillance from digital video cameras deployed throughout the city, particularly in high-crime areas. Digital video streams can be monitored from police headquarters or any police vehicle, drastically improving officer safety. This is one of the most aggressive forays into wireless technology by any police department in the country, and it has been designed, installed and managed by LTW.

The bottom-line is Let's Think Wireless is helping the City of Newark to improve officer safety and save money. Isn't it time for you to think wireless?

Call us. We've got the answers.
1-888-711-MILL (6455)
inquiry@winmill.com

More than 200 police cars are outfitted to connect to the wireless network, receiving uninterrupted high-speed access, even when traveling up to 70 miles/hour. Officers can view real-time video from any camera in the city.

Let's Think Wireless helps municipalities increase bandwidth, provide true redundancy and eliminate monthly telco/leased-line charges by providing private wireless-networking solutions. We have surveyed, designed, implemented and maintained wireless networks for prominent townships, public safety departments, and businesses throughout the northeast.

Digital cameras mounted throughout the city provide real-time monitoring, and state of the art radios deployed on 59 rooftops provide uninterrupted service all over Newark.
